WORK EXPERIENCE

Freelancer in game developing

Hanabi Studio (may 2026 - now)

- Developing and integrating the main gameplay mechanics on Unity for the LEAR.N 2045 project
- Conceiving interaction systems to offer smooth and coherent feedback for the players' game feel.
- Creating custom shaders with Unity's ShaderGraph interface, and a centralized system controlling the shaders through a generic reusable script on any scene object, making the iteration on visual effects an easy feat.

Gameplay Developing Internship

Gaming Campus (june 2025 - august 2025)

- Conceiving and developing a Guitar Hero-like rhythm game prototype on Unity (main mechanics, UI and music selector).
- Implementing a procedural generation system based on the music's own BPM for spawning the notes.
- Transferring the prototype mechanics over to a DirectX12 engine project which was developed simultaneously.

Narrative Design Internship

Gaming Campus (june 2024 - august 2024)

- Writing an entire detailed narrative outline (tree diagram with all the possible endings, linking the scenes and consequences of actions made by the player.
- Intensive and deepened research in psychological disorders and social facts/figures for the reliability of the script and the precise portrayal of the characters.
- Programming the tree diagram on the RenPy engine in Python and installing the translation script for English and French.

PROJECTS

The Bookinist - Tech Lead and Creative Director

Kipitlow (mars 2026 - avril 2026)

- Leading a team of 7 developers with the help of a technical producer : Use of the Agile method for project management (scrum and kanban board).
- Building a concise game and narrative design by writing a complete Game Design Document, while keeping the artists' wishes in check.
- Friendly and stable communication between the Art, Business and Video departements while keeping a professional stature.
